Allowable Subject Matter

1. Claims 1-17 and 19-21 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. The primary reasons for the allowance of the independent claims 1, 7, 13, 14 and 20 are the inclusion of the following limitations that are not found in the prior art and they are uniquely distinct features. The closest prior art are Hile et al. (5,319,776) and Anisbury et al (6,078,924). Hile et al. discloses a method for preventing the spread of a virus during data transfer into a computer system. Hile et al buffers the incoming data stream and then checks the data stream character by character against virus signature strings in a state machine utilizing a state table that includes the current state of the machine. If a virus signature is detected the user is alerted and the storage of data onto destination medium is terminated. Anisbury teaches a system that provides an information platform that automates the collection of data, provides a method for organizing the library of information and provides analysis using multiple content-types, thereby providing user with a market understanding necessary to execute rapid and knowledgeable decision-making. These two arts, singularly or in combination, fail to anticipate or render the following limitations within the context of the whole claim(s):

“Claim 1: receiving an input stream comprising a first plurality of characters, a second plurality of characters, and at least one variable character between the first plurality and second plurality of characters, wherein the first plurality and the second plurality of characters together constitute a REGEX signature.”

“Claim 7: receive an input stream, the input stream comprising a first plurality of characters, a second plurality of characters, and at least one variable character between the first plurality and the second plurality of characters, wherein the first plurality and the second plurality of characters together constitute a REGEX signature.”

“Claim 13: a network interface for receiving an input stream comprising a first plurality of characters, a second plurality of characters, and at least one variable character between the first plurality and the second plurality of characters, wherein the first plurality and the second plurality of characters together constitute a REGEX signature.”

“Claim 14: receive an input stream comprising a first plurality of characters, a second plurality of characters, and at least one variable character between the first plurality and the second plurality of characters, wherein the first plurality and the second plurality of characters together constitute a REGEX signature.”

"Claim 20: means for receiving an input stream comprising a first plurality of characters, a second plurality of characters, and at least one variable character between the first plurality and the second plurality of characters, wherein the first plurality and the second plurality of characters together constitute a REGEX signature."

4. The dependent claims 2-6, 8-12, 15-17, 19 and 21 are allowed because they are dependent on the allowed parent claims.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Abdulhakim Nobahar whose telephone number is 703-305-8074. The examiner can normally be reached on M-F 8-5.
